

## **The ASE Index Quarterly Review**

September 26, 2016

Mr. Nader Azar the CEO of the Amman Stock Exchange (ASE) said that the ASE has conducted the periodic quarterly review of the ASE index constituents in purpose of ensuring that the ASE General Price Index reflects the market performance and the trading activity of the listed companies. By this rebalancing, the activity of listed companies in regard to trading during the last quarter has been reviewed. After that, the ASE has conducted its screening process for all listed companies using the full market capitalization of the companies and the number of trading days during last quarter. It is worth mentioning that the criteria adopted by the ASE are similar to the international practices applied in this field. These criteria are applied by many leading international index providers.

Mr. Azar added that as a result of this review, ten companies had been excluded from the index sample and other ten companies had been added. The companies that had been excluded from the index sample were: Amoun International for Investments, National Poultry, The Jordanian Pharmaceutical Manufacturing, Afaq Holding for Investment & Real Estate Development, Siniora Food Industries, al-Isra for Education and Investment, Jordanian Co. for Developing & Financial Investment, Emmar Investments & Real Estate Development, Jordan French Insurance, and International for Medical Investment.

The companies that had been added to the index sample were: Rumm Financial Brokerage, Transport & Investment Barter Company, Nutri Dar, Comprehensive Land Development and Investment, Comprehensive Multiple Project Company, Future Arab Investment Company, Arab International Hotels, Al-Israa for Islamic Finance and Investment, Salam International Transport & Trading, and Zara Investment Holding.

As part of the process, the ASE calculated the free float for all listed companies at the ASE based on the data available at the Securities Depository Center (SDC) website. This review also includes the reduction of the weights for some companies to maintain the 10% cap that applied to index constituents.

Mr. Azar clarified that the index sample includes one hundred companies which are the most active in the ASE and the highest in terms of market capitalization. The full market capitalization of the index constituents' represent (89.9%) of the total market capitalization of the companies listed at the ASE. The free float market capitalization of the index constituents' represents (93.5%) of the total free float market capitalization of the listed companies at the ASE.

In light of the above, the index constituents will be modified on 3<sup>rd</sup> of October 2016. Interested parties can access to the constituents of the index with the new weights through the following link:
